

MARITIME OSINT AGENT v0.4

Free, local-first maritime incident monitoring for small teams

What It Does

The Maritime OSINT Agent helps small maritime security teams collect, classify, review and brief open-source and user-submitted maritime incident information across the Indian Ocean Region and connected maritime approaches.

Built for no-cost operation: local-first backend, SQLite database, open-source components, Telegram polling, public open sources and no mandatory paid APIs.

Capability	Operational Value
Automated OSINT collection	Continuously monitors public sources, RSS, advisories and GDELT-style media queries.
Telegram group intake	Multiple collectors can submit links and observations through a controlled group.
Analyst review workflow	Review, confirm, reject, reclassify, comment and delete incidents.
Audit log	Maintains accountability for edits, deletions, category moves and comments.
Dashboard and map	Visualise incidents, filters, alerts, sources and logs in one browser interface.
Exports and daily briefs	Generate CSV exports and machine-generated daily maritime security briefs.

Incident Categories

Piracy & Armed Robbery | Contraband Smuggling | IUU Fishing | Illegal Human Migration | Maritime Incidents | Maritime Security Threats | Maritime Environmental Pollution | Maritime Cyber Security | Hybrid Threats to Maritime Security

Deployment Model

One central local machine runs the application. Users on the same LAN access the dashboard through a browser. Collectors may also submit through Telegram. The system should not be exposed directly to the public internet without hardening.

Why It Is Useful

- Converts scattered public reporting and human-submitted leads into a structured incident queue.
- Preserves source attribution, review status, analyst comments and audit trail.
- Allows multiple collectors to contribute without giving everyone dashboard admin access.
- Supports maritime fusion centre style workflows without mandatory cloud or paid API dependency.

User Roles

Role	Primary Use
Admin	System, users, sources, audit
Analyst	Review, edit, comment, delete, export
Collector	Submit links and observations
Viewer	Read-only dashboard access

Recommended First Use

Start locally, test sources, enable Telegram group intake, create user roles, and only then share over LAN. Use VPN rather than public exposure for remote users.

Product Positioning

A lightweight, extensible, no-cost maritime OSINT collection and review platform for small teams that need structured incident monitoring without buying a commercial MDA system.
